

Passage, 2008

Model for a architectural installation

Construction: Simple reductive construction

Walls: Black heavy rubber sheets suspended from simple linked frames

Dimensions: Circa 280cm height x 450cm wide x 800cm + length variable depending on space

Please note: This model is for visualisation only.

PASSAGE should be installed freestanding. The space between the two side elevations should be only just wide enough for one person to walk through. The combination of the 'wideness' on one side and the 'narrowness' on the other side should interfere with the balance of the person who passes through the installation.

PASSAGE, 2008 is a architectural installation to make the viewer perform a 'passing through' and experience a physical intervention while doing so.
