

### SEX-ROOM / SEX BOOTH

Where is the Sex-Room? Straight to the end on your right. A table for ironing, a room for bath, another for the bed, a dining-table, a Laundromat a place for the laundry, an exercise facility: a gym....Space named by the description of what happen on them, socially approved, lack of confusion.....Places related to actions... Is the place for sex missing? Sex doesn't have a specific place, what does this mean? It is that it happen in many locations(It can be done in a car, over the kitchen table, in a bed ....), or that it doesn't happen at all? It doesn't have the easiness of the place, a place designed for it. This might mean that this action is not constrain to a place but it might be related to the lack of need for this action and further more the lack of recognition may refer the implied non legitimate condition of this action.

COMMUNICATION BOOTH Prefabricated construction, made out of 3 modular pieces (one central wood with two plastic fingers) of 2 meters long each other that will be screw together on site. The piece is 6 meters long by 1meter wide by 2 meters height. This is the minimum dimensions, and it could slightly vary depending upon wood panel standards. The structure is made out of lumber (around 8cmx8cmx200cm height) . It is located in the outside of the booth and it the same for the 3 pieces. The panels screw to the structure are made out of plastic and wood following the next sequence: plastic on the left, -wood on the center, and -plastic on the right ) The plastic is a semi transparent- semi opaque plastic and will be screw to the structure from the inside (around 0.3 to 0.5 mm) there is a material that look like cellular polycarbonate but is white, not really transparent. The wood panels ( around 0.8cm) will go also screw to the structure form the inside. A door made a out of the same plastic is located in both corners of the construction. A pushing door, made out of two pieces of plastic is located in the intersection between the plastic and the wood piece, we need two of those. A double frame is located in the central point of the booth and it will be used to hold and keep tense a latex sheet. The size of this frame will be the interior of the section. A powerful fluorescent light will be screw to the central beam in the plastic finger
